Equivoque is a visual novelette for daring children of all ages. With the help of his friends, Bundt Kuchen pushes himself and his friends out of the bookstore and into a journey to find the truth and their place in the magical world. Mint the Splendid, a famous magician comes to town and helps Bundt to pose as an apprentice magus. With his help, Bundt disguises himself in a magus costume, invests in a magical talisman, learns how to cast and understand magic and then takes on his new journey into a world where truth and lies are all too easily concealed. Will the truth be found or will the lies be told? Features: + A stylish animated story told in a novel format. + Gritty, modern animation and cool, vibrant characters. + Quirky, off-the-wall script, which is suitable for those of all ages. + A plethora of "first person" animations to add more life to the story. + Magical audio synced with the animation. + Full voice acting for every character. + English, German and French voice tracks. + Colors are vivid and cute. + 17 chapters with more to come. Grant Farquhar, a doctor at St Anthony's Hospital, has worked for nine years to support young people and raise awareness about mental health issues, particularly around drug and alcohol problems. He said: "I've found that a lot of the young people that I work with have hidden mental health problems, and many have been failed by the services they've received or services they've accessed in the past. "It is a real shame that there is a stigma around mental health and people are reluctant to admit they have a problem, and consequently, a lot of young people don't get the help they need." A new initiative to increase awareness of mental health issues amongst young people has been launched by the NHS's young people health champion. Grant Farquhar, a doctor at St Anthony's Hospital,

DLC:A:Death Matches, A:Death Missions, A:Special Items, A:Item Packs.Q: How to find input size (width) in inches I am creating an app that shows an image preview of a print (in-progress). If the image doesn't cover the whole print (so there is some whitespace in the print) the image automatically scales to fit the whole print. The problem is the scaling is centered (horizontally) with the content (left, right, top and bottom). But the content isn't necessarily centered. I am searching for a way to determine the input size (e.g. width) of the print image to determine how to center the image. (e.g. the input width in inches). I've tried converting the width from pixels to inches using `Width.toInches(sp)` but that didn't work because the result is not an actual number. It always comes out to be 0. Which I thought would be correct (width = 0 and the pixels = 0*72). EDIT: I've tried several different methods using several different screen sizes and prints. And I'm sure I'm doing something wrong. I've tried different methods with `width.toInches(sp)` but it always comes out to be 0. The print always returns 0, the screen never returns an actual value. The photo frame seems to work correctly because it's based on pixel width. In other words, if I measure the print in inches on the ruler it comes out to be 5.25 inches. I've also tried this: `Display display = ((WindowManager) getSystemService(WINDOW_SERVICE)).getDefaultDisplay(); Point size = new Point(); display.getSize(size); width = size.x;`

is a worldwide investment management company that focusses on specialising in ICOs and fintechs. They bring a huge amount of subject matter expertise to ICOs and I am delighted to be working with them to share their knowledge. Brooke: Tell us a little bit about Realm Hubs and why you decided to have it within Hubs and what it does within the Hub. Matt: When Realm was initially set up, it was to connect all the different different realms you could envisage in terms of having different ecosystems, like Games, Marketplace, Communities and Issuers. There wasn't a single hub yet so we sought to create that, but we needed to build it from scratch as we didn't have a use case right away, so we came up with this concept of Realm Hubs and we came up with this realm toolkit which was essentially a toolkit of capabilities and pieces of software. We had it both on the desktop and on the server-based. When we looked at it, there were a few issues that we needed to solve. One was our reliance on emails and attachments. For some of the user groups we have, that would be a major issue because they don't have email. Their emails are outside of the Realm account, they're not in the email/sim accounts. So how do we keep that information between us and our clients? So Realm Opened that door in a way where it could be automated, actually. Basically, there's Realm business email addresses, and there are things we can do. Really, it became very, very, very popular. That's one of the really cool things about the hub," says Brooke. "One of the issues from the beginning was that we were focusing on the people who were using apps and they didn't really need the Business Email addresses. They already had email addresses because they were using a desktop based app. So we had to work around that real hard and as a result it's made a big difference to the number of emails we get and the part we get back. "But I believe the biggest draw for Realm investors to the hub is the ability for us to create these different realms. It's the ability to build our own markets in real time and have real trading volumes. They can sort of like the binary options that you see on the news. You can build your own marketplace
